Reference is made to the following documents:

D1: JP 05-325210 (PIONEER ELECTRONIC CORP) 10 Dec. 1993

D2: US 5297131A (SONY CORP.)22 MARCHJ 1994

1. Novelty and Inventive Step

The subject matter of claims 1-5 of the present invention is a track jump apparatus and method which perform track jumping in consideration of the position of a pickup and the position of a lens of the pickup in an optical recording medium and system with eccentricity are provided.

D1 and D2 is the most relevant state of the arts of the present inventions.

D1 discloses a method of performing a stable jump without being affected by the eccentricity of an optical disk by varying either one of the time width or the wave height value of a brake pulse in accordance with the time till a zero crossing of tracking error signals which correspond to the amount of the disk eccentricity.

D2 discloses a eccentricity detection and compensation of a disk by a preformatted encoding pattern. An area for recording preformatted is provided on a rewritable disk in order to obtain information of an eccentricity provided when the disk is chucked.

However D1 does not include servo which judges a position of the pickup from the error signal output from RF processing unit when a track jump is performed and outputs a track jump start/end control signal for the pickup, which gives clear indication of an improvement on a track access control system.

Therefore, the subject matter of the claim 1-5 of the present invention seems to be novel, and cannot be considered of combination inventive step (PCT Article 33(2)-(3)).

2. Industrial Applicability

Claims 1-5 of the present invention meet the criteria set out in PCT Article 33(4) because they are directed to a track jump apparatus and method in an optical recording medium and system. Therefore, the subject matter of claims 1-5 is considered to be industrially applicable.
